This journal is printed on acid-free paper.

Contents of Volume 140

Number 1, March 1993

Kinetics of Methane Oxidative Coupling on Li-Doped TiO_2 Catalysts
A. M. Efstathiou, D. Boudouvas, N. Vamvouka, and X. E. Verykios 1

Deactivation of Copper–Nickel Catalysts Due to Changes in Surface Composition
N. M. Rodriguez, M. S. Kim, and R. T. K. Baker 16

Stereoselective Thymol Hydrogenation. I. Kinetics of Thymol Hydrogenation on Charcoal-Supported Platinum Catalysts
Michèle Besson, Louise Bullivant, Nathalie Nicolaus, and Pierre Gallezot 30

Pseudocomponent Test of the Relative Utilization of Feed Components in Fluid Catalytic Cracking
Robert H. Harding, Robert R. Gatte, and Carmo J. Pereira 41

Non-Faradaic Electrochemical Modification of Catalytic Activity. VII. The Case of Methane Oxidation on Platinum
P. Tsiakaras and C. G. Vayenas 53

Epoxidation of Lower Olefins with Hydrogen Peroxide and Titanium Silicalite
Mario G. Clerici and Patrizia Ingallina 71

^{27}Al NMR, FT-IR and Ethanol–^{18}O TPD Characterization of Fluorided Alumina
E. C. DeCanio, J. W. Bruno, V. P. Nero, and J. C. Edwards 84

Chromium Oxide-Catalyzed Disproportionation of Chlorodifluoromethane: A Mechanism Study
D. R. Coulson, P. W. J. G. Wijnen, J. J. Lerou, and L. E. Manzer 103

An Auger Electron Spectroscopy Study of the Activation of Iron Fischer–Tropsch Catalysts. I. Hydrogen Activation
Allen G. Sault 121

An Auger Electron Spectroscopy Study of the Activation of Iron Fischer–Tropsch Catalysts. II. Carbon Monoxide Activation
Allen G. Sault and Abhaya K. Datye 136

Cracking and Isomerization of Hydrocarbons with Combinations of HY and HZSM-5 Zeolites
Z. Zainuddin, F. N. Guerzoni, and J. Abbot 150

Regeneration of Nickel Catalyst on Carbon
Tetsuya Haga and Yoshiyuki Nishiyama 168

Electron Optical Studies of Fresh and Reduced Vanadium Pentoxide-Supported Rhodium Catalysts
A. Legrouri, T. Baird, and J. R. Fryer 173

Effects of Solvents on Deep Hydrodesulfurization of Benzothiophene and Dibenzothiophene
Atsushi Ishihara, Tetsuro Itoh, Takuo Hino, Masatoshi Nomura, Pingyen Qi, and Toshiaki Kabe 184

A Model γ-Al_2O_3-Supported Re–Pt Catalyst Prepared from $[Re_2Pt(CO)_{12}]$. I. Synthesis and Spectroscopic Characterization
A. S. Fung, M. R. McDevitt, P. A. Tooley, M. J. Kelley, D. C. Koningsberger, and B. C. Gates 190

The Chemical State of Gallium in Working Alkane Dehydrocyclodimerization Catalysts. *In Situ* Gallium *K*-Edge X-ray Absorption Spectroscopy
George D. Meitzner, Enrique Iglesia, Joseph E. Baumgartner, and Enoch S. Huang 209

Selectivity Patterns in Alkane Oxidation over $Mg_3(VO_4)_2$–MgO, $Mg_2V_2O_7$, and $(VO)_2P_2O_7$
P. M. Michalakos, M. C. Kung, I. Jahan, and H. H. Kung 226

The Chain Mechanism in Catalytic Cracking. The Kinetics of 2-Methylpentane Cracking
Yingxian Zhao, G. R. Bamwenda, W. A. Groten, and B. W. Wojciechowski 243

The Kinetics of Hydrocarbon Cracking. The Cracking of *n*-Nonane
W. A. Groten and B. W. Wojciechowski..... 262

Note

Transient Infrared Study of Methanation and Ethylene Hydroformylation over Rh/SiO_2 Catalysts
Michael W. Balakos, Steven S. C. Chuang, and Girish Srinivas..... 281

Number 2, April 1993

Interaction of Hydrogen with Metal Sulfide Catalysts—Direct Observation of Spillover
N. M. Rodriguez and R. T. K. Baker..... 287

Rearrangement and Disproportionation of Toluene over $La_{1-x}Sr_xNiO_3$ Catalysts
Jeng-Jong Liang and Hung-Shan Weng 302

Heterogeneous Catalyzed Benzylic Acetoxylation of Methylated Aromatic Hydrocarbons
Eric Benazzi, Hubert Mimoun, and Charles J. Cameron 311

Bond Energy Effects in Methane Oxidative Coupling on Pyrochlore Structures
C. Petit, A. Kaddouri, S. Libs, A. Kiennemann, J. L. Rehspringer, and P. Poix 328

Reduction of Acetophenones over $Pd/AlPO_4$ Catalysts. Linear Free Energy Relationship (LFER)
M. A. Aramendía, V. Borau, J. F. Gómez, A. Herrera, C. Jiménez, and J. M. Marinas..... 335

Investigations of Active Sites for Methane Activation in the Oxidative Coupling Reaction over Pure and Li-Promoted MgO Catalysts
Ming-Cheng Wu, Charles M. Truong, Kent Coulter, and D. Wayne Goodman 344

Influence of the Carrier on the Interaction of H_2 and CO with Supported Rh
Theophilos Ioannides and Xenophon Verykios 353

The Role of Chlorine in Oxygen Adsorption on Ag(111)
Kai Wu, Dezheng Wang, Xuming Wei, Yuming Cao, and Xiexian Guo..... 370

Influence of the Structural Parameters of Y Zeolite on the Transalkylation of Alkylaromatics
A. Corma, F. Llopis, and J. B. Monton 384

Electron Microscope Investigation of Mesopore Formation and Aluminum Migration in USY Catalysts
C. Choi-Feng, J. B. Hall, B. J. Huggins, and R. A. Beyerlein 395

Ester Hydrogenation over Pd–Zn/SiO_2
B. E. Green, C. S. Sass, L. T. Germinario, P. S. Wehner, and B. L. Gustafson 406

CO Oxidation on Pt/α-Al_2O_3(0001): Evidence for Structure Sensitivity
G. S. Zafiris and R. J. Gorte 418

Microstructural Changes and Volatilization of Rh and Rh/Ce on SiO_2 and Al_2O_3 in NO + CO
K. R. Krause and L. D. Schmidt 424

Microcalorimetric Study of the Adsorption and Reaction of CO, O_2, CO + O_2, and CO_2 on NaX Zeolite, Pt/NaX, and Platinum Metal: Effect of Oxidizing and Reducing Pretreatment
N. D. Gangal, N. M. Gupta, and R. M. Iyer 443

XPS and Reaction Investigation of Alkali Promotion of Rh/La_2O_3
George R. Gallaher, James G. Goodwin, Jr., Chen-Shi Huang, and Marwan Houalla 453

AC Electrical Characterisation of Heterogeneous Catalysts
A. Ovenston and J. R. Walls 464

Hydrocarbon-Induced Agglomeration of Pd Particles in Pd/HZSM-5
Zongchao Zhang, Bruce Lerner, Guan-Dao Lei, and Wolfgang M. H. Sachtler 481

Relationship between the Scaling of the Acid Strength of Lewis Sites by EPR and NMR Probes
D. J. Coster, A. Bendada, F. R. Chen, and J. J. Fripiat 497

Evaluation of Modes of Catalyst Deactivation by Coking for Cumene Cracking over Zeolites
A. Bellare and D. B. Dadyburjor 510

Comparison between Zeolite β and γ-Al_2O_3 Supported Pt for Reforming Reactions
Panagiotis G. Smirniotis and Eli Ruckenstein 526

Catalyzed Carbon Gasification Studied by Scanning Tunneling Microscopy and Atomic Force Microscopy
X. Chu, L. D. Schmidt, S. G. Chen, and R. T. Yang 543

Carbon Monoxide and Methane Oxidation Properties of Oxide Solid Solution Catalysts
R. Doshi, C. B. Alcock, N. Gunasekaran, and J. J. Carberry 557

CO-Induced Changes in the Oxidation State of Rhodium Supported on MgO: X-Ray Photoelectron Spectroscopic Study
Angelos M. Efstathiou, Beng Jit Tan, and Steven L. Suib 564

The Effect of Coadsorbates in Reverse Water–Gas Shift Reaction on ZnO, in Relation to Reactant-Promoted Reaction Mechanism
Takafumi Shido and Yasuhiro Iwasawa 575

Studies of Gas Adsorption on ZnO Using ESR, FTIR Spectroscopy, and MHE (Microwave Hall Effect) Measurements
Byung-Ki Na, Arden B. Walters, and M. Albert Vannice 585

H/D Exchange of Cyclopentane on Pt/Mordenites: Probing for Monoatomic Pt Sites
Guan-Dao Lei and Wolfgang M. H. Sachtler 601

Author Index for Volume 140 614

NOTICE

The Subject Index for Volume 140 will appear in the December 1993 issue as part of a cumulative index for the year 1993.

INFORMATION FOR AUTHORS

The *Journal of Catalysis* publishes articles dealing with original studies in heterogeneous and homogeneous catalysis as well as studies relating catalytic properties with chemical processes at surfaces, studies of chemistry of surfaces, and engineering studies related to catalysis. All articles will be published in English.

Submission of Manuscripts. Manuscripts should be sent by registered mail to either of the Editors:

Professor Gary L. Haller
Department of Chemical Engineering
P.O. Box 2159 Yale Station
Yale University
New Haven, Connecticut 06520

Professor Frank S. Stone
School of Chemistry
University of Bath
Bath BA2 7AY, England

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Catalysis* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. Submit manuscript (in English) in triplicate, including the original typewritten copy, with copies of all figures and tables. Originals of micrographs should also be submitted in triplicate for purposes of manuscript reviewing. All material (including tables, reference lists, etc.) should be typed double-spaced on one side of 8.5 × 11-in. white bond paper (with 1-in. margins on all sides). Each page of the manuscript should be numbered. *Page 1* should contain the article title, authors' names (without degrees), affiliations, a running title (abbreviated form of title) not exceeding 45 letters and spaces, and the name and complete mailing address (and telephone and fax numbers, if possible) of the person to whom proof should be mailed. *Page 2* should contain a short abstract.

Authors should use descriptive headings in this order: Abstract, Introduction, Methods, Results, Discussion, Acknowledgments, and References.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

If the manuscript refers to recently submitted manuscripts or papers in press (with the *Journal of Catalysis* or other journals) then please supply three copies of them so that the reviewers can judge the new manuscript in its proper context.

Revised manuscripts should be returned with one copy marked to show where changes have been made.

Notes and *Letters to the Editor* may not exceed 8 double-spaced typewritten manuscript pages (including tables and figures). Accepted Notes will not receive publication priority over articles.

Letters to the Editor will be considered for priority publication under the following conditions: (a) Letters must be related to some statement made in a recently published article in this Journal; (b) in cases of conflicting views on any topic, no more than one Letter from each author will be accepted.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

The SI (Systeme International) system of units will be accepted without editorial change. Authors using other units are encouraged to define them in terms of SI units once in each publication, e.g., in an article where pressures are quoted in Torr to write "1 Torr = 133.3 N m^{-2}." For information concerning SI units, see *Quantities, Units and Symbols for Physical Chemistry*, 4th ed., prepared by I. Mills and published by Blackwell Scientific, Oxford, 1988.

Footnotes should be avoided if possible; but if essential, they should be designated by superscript Arabic numerals (starting with title) in the text.

Tables should be numbered with Arabic numerals in order of mention in the text. They should be typed double-spaced on separate pages. Each table should have a short descriptive caption typed (double-spaced) above the table. Table footnotes (indicated by superscript, lowercase, italic letters) should be typed at the end of the table.

Figures should be numbered with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed double-spaced together on a separate page. All illustrations should be in finished form suitable for reproduction. They should be planned to fit the proportion of the printed page (5.5 × 8 in.; column width, 2-5/8 in.). No figures should exceed 8.5 × 11 in. (21 × 27.5 cm). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black.

Copies of drawings are not acceptable unless they are high contrast glossy prints. All but the very simplest structures and structural formulas must be designed for direct reproduction. Illustrations in color can be accepted only if the authors defray the cost.

Electron micrographs. Please supply three photographic copies of these so that the reviewers can inspect the fine details they contain.

References to the literature should be cited in the text by italic Arabic numerals in parentheses, set on the text line, and listed numerically at the end of the paper. Abbreviations of journal titles should follow the style used in *Chemical Abstracts' Service Source Index*, 1985. Style and punctuation of references should be in accordance with the following examples:

1. Latef, A., Aissi, C. F., and Guelton, M., *J. Catal.* **119,** 368 (1989).
2. Louis, C., and Che, M., *in* "Reactivity of Solids" (P. Barret and L. C. Dufour, Eds.), Vol. B, p. 1057. Elsevier, Amsterdam, 1985.
3. Pines, H., "The Chemistry of Catalytic Hydrocarbon Conversions." Academic Press, New York, 1981.

Proofs. Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

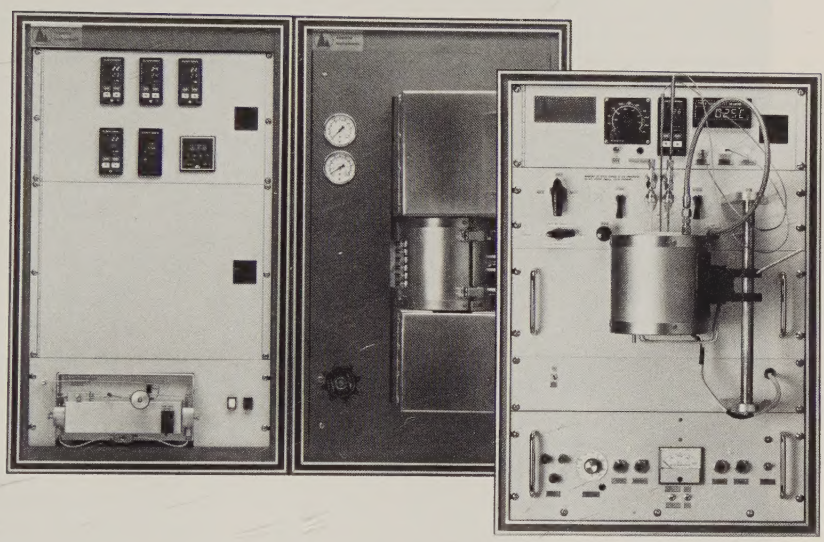
Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased; an order form will be included with proofs.

Personal Computer Disks. Manuscripts may be submitted to the *Journal of Catalysis* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).

If you find catalyst research too slow, too labor-intensive or too limited...



We offer two solutions

Altamira's *Catalyst Characterization Systems* are designed for researchers with too little time and too few people. The AMI-1 performs TPD, TPR, TPO, TP reaction, chemisorption, BET and pore size distribution. You can set up an experiment in as little as 30 minutes, then walk away and the AMI-1 will do the work for you.

For increased thruput, the new AMI-3 lets you load 3 samples for simultaneous operation.

Altamira also offers AMI-2000 *Bench-Scale Reactor Systems* which are customized to your specifications. Tell us about your application and hardware requirements. Altamira will do the rest. We'll deliver a turnkey system and train your personnel on-site. Manual and automated systems are available.

To obtain the name of the sales representative in your area, contact: Altamira Instruments, 2090 William Pitt Way, Pittsburgh, PA 15238 USA • Tel: (412) 826-3080 • FAX: (412) 826-3081 • Telex: 5106019265.

Altamira Instruments

Bioorganic Chemistry

An International Journal

Editor
Gordon A. Hamilton
Pennsylvania State University
University Park

Publishing original research at the interface of chemistry and biology, **Bioorganic Chemistry** presents articles in which the principles and techniques of organic and physical organic chemistry are used in attempting to solve problems of relevance to biology or that describe chemical studies inspired by some biological observation. The emphasis is on chemical or molecular approaches to the solution of important biological problems. Regular articles, review articles, and preliminary communications are published.

Research Areas Include

- Achievement of useful organic transformations by the application of enzymes
- Application of kinetic, isotopic, stereochemical, and spectral techniques to the study of enzymes and metabolic pathways
- Characterization of the chemistry involved in new enzymatic reactions and metabolic pathways
- Chemical modifications of nucleic acids and the application of such modifications to the manipulation of genetic material
- Description of new chemistry that results from findings in biology
- Determination of the molecular mechanisms for the action of hormones and of the molecular basis of pharmacology
- Development of catalyst systems that mimic enzymes and coenzymes
- Development of mechanism-based and active site-directed inhibitors for enzymes, and characterization of the chemistry associated with their inhibition
- Elucidation of enzyme mechanisms and structure
- Elucidation of the principles involved in receptor site recognition
- Investigation of the structure and mechanism of action of pheromones and other chemical communicants
- Investigations of chemical model systems for enzymes, peptides, and other biological molecules
- Studies related to coenzyme structure and reactivity

Volume 21 (1993), 4 issues
ISSN 0045-2068
In the U.S.A. and Canada: $170.00
All other countries: $200.00

Journal of Differential Equations

Editor-in-Chief
Jack K. Hale
Georgia Institute of Technology, Atlanta

The **Journal of Differential Equations** is concerned with the theory and the application of differential equations. The articles published are addressed not only to mathematicians, but also to those engineers, physicists, and other scientists for whom differential equations are valuable research tools.

Research Areas Include

- Mathematical control theory
- Ordinary differential equations
- Partial differential equations
- Related topics
- Stochastic differential equations
- Topological dynamics
